

# HEALHUB – AI Health Triage Assistant System

Created By: Harshit Patidar | Mentor: Dr. Amit Sinhal

## Problem Statement

Healthcare access is often delayed because patients cannot judge symptom severity, choose the right doctor, or find suitable tests and treatment. Hospitals face long queues, poor appointment coordination, lack of real-time updates, and difficulty managing medical records. . A unified smart platform is needed to guide patients, reduce waiting time, and improve hospital efficiency.

## Proposed Solution

HealHub is an AI triage and management system. It analyzes symptoms and provides guidance on severity, remedies, medications, warning signs, and specialist suggestions. Patients can book appointments, lab tests, and radiology services, while doctors share prescriptions and reports digitally. It also includes report analysis, real-time queue tracking, and an emergency SOS feature.

## Objectives

The main objective of HealHub is to make healthcare more accessible, efficient, and intelligent. It aims to help patients understand their health condition early, reduce unnecessary hospital visits, improve appointment and queue management, support digital medical record handling, and strengthen emergency response. The system also aims to improve coordination between patients, doctors, receptionists, and administrators through a centralized digital platform.

## Unique Selling Proposition

- Combines AI triage, appointment booking, lab & radiology booking, AI prescriptions, and report analysis in one platform
- Offers intelligent symptom analysis and simple report explanations
- Enables live waiting time tracking for better patient experience
- Supports multi-role (Patient, Doctor, Admin, Receptionist)

## Technology Stack

### Implementation

## Design & Implementation

## Conclusion

HealHub is a smart digital healthcare platform that improves patient care, reduces waiting time, and simplifies hospital operations. By combining AI-based triage, appointment management, lab booking, report analysis, and emergency assistance, it provides a complete healthcare experience in one system. The platform has strong potential to make healthcare faster, more organized, and more user-friendly for both patients and medical staff.
